

School-Based Health Centers & Telemedicine

Leaving work to pick up a sick child at school can be tough for parents – and many disadvantaged children have untreated medical issues that impact their academic performance. But school-based health centers (SBHCs) are using telemedicine to create healthier futures for all students.

School-Based Telemedicine Solves Children's Health Challenges

- ▶ Children with chronic conditions can be treated at school.
- ▶ Parents can participate in the virtual visit from work.
- ▶ Low-income students can receive consistent care.
- ▶ Students perform better in class and are more likely to graduate.
- ▶ Injuries and illnesses are treated faster.
- ▶ At-risk students can receive counseling.
- ▶ Classroom contagion is minimized.

GlobalMed: The Leader in School-Based Telemedicine

GlobalMed's data-driven devices, integrated hardware and software system enable secure, evidenced-based virtual medicine across all specialties.

eNcounter[®]

SBHCs use the GlobalMed eNcounter[®] platform to treat at-school injuries, manage chronic conditions, provide counseling and deliver medical care to underserved children.

As the leader in school-based telemedicine, GlobalMed can help schools navigate the grant landscape, from identifying the equipment needed to designing a telemedicine strategy for optimal student outcomes and maximum community impact.

Telemedicine Funding & Grant Resources

School-Based Health Center Capital (SBHCC) Program (HRSA-19-073) Technical Assistance

The School-Based Health Center Capital (SBHCC) program funds telemedicine programs to increase access to mental health, substance abuse, and childhood obesity-related services in SBHCs.
