

School-Based Health Centers & Telemedicine

Leaving work to pick up a sick child at school can be tough for parents – and many disadvantaged children have untreated medical issues that impact their academic performance. But school-based health centers (SBHCs) are using telemedicine to create healthier futures for all students.

School-Based Telemedicine Solves Children's Health Challenges

- ▶ Children with chronic conditions can be treated at school.
- ▶ Parents can participate in virtual visits remotely.
- ▶ Low-income students can receive consistent care.
- ▶ Students classroom disruptions are minimized, increasing graduation rates.
- ▶ Injuries and illnesses are treated faster.
- ▶ At-risk students can receive mental health services.

GlobalMed: the Leader in School-Based Telemedicine

GlobalMed's data-driven devices, integrated hardware and software system enable secure, evidenced-based virtual medicine across all specialties.

eNcounter**NOW**

SBHCs use the GlobalMed eNcounter® platform to treat at-school injuries, manage chronic conditions, provide counseling and deliver medical care to underserved children.

GlobalMed can help schools navigate the grant landscape, from identifying the equipment needed to designing a telemedicine strategy for optimal student outcomes and maximum community impact.

Funding Resources

HRSA School-Based Health Center Grants

Health Resources and Services Administration (HRSA) routinely funds telemedicine programs to increase access to mental health, substance abuse, and childhood obesity in SBHCs.
